

ILLINOIS' SOFTWARE PIRACY CRIMPS BUDGETS; LOST REVENUES COULD HAVE FUNDED THOUSANDS OF HIGH TECH WORKERS AND POLICE OFFICERS

Study Shows Software Theft is Significant Problem in Eight US States

Washington, DC (July 16, 2008) – The theft and use of unlicensed personal computer software in Illinois is above the national average, causing serious economic and social impacts. This is among the findings of the [2007 State Piracy Study](#), released today by the Business Software Alliance (BSA), an international association representing the software industry and its hardware partners.

The national average for software piracy in 2007 was 20%, meaning that one in five pieces of PC software installed in the United States were unlicensed. Illinois' rate was 22%, or ten percent above the national average. Of the seven other states included in the study, piracy rates ranged from a high of 27% in Ohio to 18% in New York. The study was conducted by IDC, the information technology industry's leading market research and forecasting firm.

Software piracy in Illinois cost software vendors an estimated \$454 million, which is higher than the *national* figure for eighty-nine other countries. Lost revenues to a wider group of software distributors and service providers cost an additional \$1.2 billion, enough to hire more than 5,600 tech workers. The lost state and local tax revenues in Illinois would have been enough to hire more than 2,500 experienced police officers.

"If one out of every five cars on Illinois's roads were stolen property, it would be a major scandal," said BSA Vice President of Anti-Piracy and General Counsel Neil MacBride. "Not only is software piracy a problem for the industry, but it really creates headaches for the companies involved."

"The most tragic aspect is that the lost revenues to tech companies and local governments could be supporting more than 5,600 new jobs and much-needed social services in Illinois," he added.

The report describes several factors that affect each state's piracy scene. For example, in Illinois, 61% of consumers told researchers they installed new software on older computers in 2007, compared to a national average of 51%. Older computers tend to have higher amounts of illegal software since new computers usually come pre-installed with legitimate software. This factor helped drive the state's piracy rate above the national average.

Revenue Shortfalls Cost Thousands of Jobs and Local Services

The following table shows the piracy rates of the eight states studied, as well as some of the economic and social impacts:

	2007 Piracy Rate	Lost State & Local Taxes in 2007 (\$M)	New Middle Schools (1)	Affordable Housing Units (2)	Police Positions (Sergeant) (3)	Propane Powered Transit Buses (4)
Arizona	21%	\$51	4	362	791	193

California	25%	\$556	28	2,884	7,524	2,098
Florida	19%	\$154	11	1,199	2,503	582
Illinois	22%	\$158	11	1,229	2,566	596
Nevada	25%	\$27	2	209	436	101
New York	18%	\$344	25	1,786	3,727	1,299
Ohio	27%	\$165	8	1,430	2,829	624
Texas	20%	\$223	11	1,732	4,018	840
Total	20%	\$1,679	100	10,831	24,395	6,335

How Informants Can Report It, and Employers Can Avoid It

Each year BSA receives more than 2,500 tips concerned unlicensed software on its website, www.bsa.org, and telephone hotline, 1-888-NO PIRACY. The majority of BSA's leads come from current or former employees who are concerned about the operational and security risks associated with illegal software.

Under BSA's "Know it, Report it, Reward it" program, individuals who provide qualified reports of software piracy are eligible to receive up to a \$1 million cash reward. However, fewer than half of the sources opt for the reward, and informal studies conducted by BSA suggest that a key driver for reporting software piracy is the motivation to simply "do the right thing."

"For companies of all sizes, not only can the use of unlicensed software potentially trigger an external audit or even a lawsuit, it can also create security vulnerabilities, productivity breakdowns and hidden internal support costs," MacBride added. To avoid such risks, businesses must create, communicate, and enforce an effective software asset management (SAM) program, MacBride said. Organizations can download a variety of free SAM tools from BSA's website at www.bsaaudit.com.

The BSA-IDC State Piracy Study covers piracy of all packaged software that runs on personal computers, including desktops, laptops, and ultra-portables. The study does not include other types of software such as server- or mainframe-based software. IDC used proprietary statistics for software and hardware shipments and enlisted IDC analysts in more than sixty countries to confirm software piracy trends.

Business Software Alliance (www.bsa.org) is the foremost organization dedicated to promoting a safe and legal digital world. BSA is the voice of the world's commercial software industry and its hardware partners before governments and in the international marketplace. Its members represent one of the fastest growing industries in the world. BSA programs foster technology innovation through education and policy initiatives that promote copyright protection, cyber security, trade and e-commerce. BSA members include Adobe, Apple, Autodesk, Avid, Bentley Systems, Borland, CNC Software/Mastercam, Corel, CyberLink, McAfee, Microsoft, Monotype Imaging, PTC, Quark, Quest Software, Siemens PLM Software, SolidWorks, Sybase, Symantec, and The MathWorks.

IDC is the premier global provider of market intelligence, advisory services, and events for the information technology, telecommunications, and consumer technology markets. IDC helps IT professionals, business executives, and the investment community make fact-based decisions on technology purchases and business strategy. More than 1,000 IDC analysts provide global, regional, and local expertise on technology and industry opportunities and

trends in over 110 countries worldwide. For more than 44 years, IDC has provided strategic insights to help our clients achieve their key business objectives. IDC is a subsidiary of IDG, the world's leading technology media, research, and events company. You can learn more about IDC by visiting www.idc.com.
