# THE ECONOMIC BENEFITS OF LOWERING PC SOFTWARE PIRACY

## CZECH REPUBLIC

January 2008

**Ten point reduction in PC software piracy would deliver an additional 1,200 new jobs, \$90 million in tax revenues, and \$440 million in economic growth in the Czech Republic**

In 2007, the Czech Republic, a country of more than 10 million people, spent \$4.1 billion on information technology (IT) – computers, peripherals, network equipment, packaged software and IT services. That spending accounted for 2.8% of gross domestic product (GDP), supported more than 7,100 IT companies with nearly 73,000 IT industry employees, and helped generate \$2.8 billion in IT-related taxes.

Yet the IT sector's contribution to the Czech economy could be even larger if the PC software piracy rate were to be lowered 10 percentage points over the next four years, creating an additional 1,194 jobs, \$439 million in local industry revenues and \$92 million in additional tax revenues for federal, regional, and local governments.

## Benefits from Lowering PC Software Piracy In Czech Republic

This incremental boost to the economy would add highly skilled jobs to the labor force, support the creation of new companies, and fund public services. Because most of the benefits accrue to services and channel firms, most of the benefits from lowering piracy stay within the country.

Lowering PC software piracy delivers such benefits because other sectors derive revenue from working with, installing, servicing, and reselling software.

Therefore, a 10 percentage point drop in PC piracy not only impacts the performance and economic contributions of the overall software industry, but also ripples outward into the IT services and distribution sectors, each of which is larger than the software industry itself.

## Study Background

The cornerstone of this research is IDC's Piracy Impact Model (PIM), which takes inputs from IDC's market research around the globe on IT spending and software piracy along with other information on IT employment levels and IT-related taxes. IDC has been conducting economic analysis on the impact of IT and software on local economies since 2002. Key inputs to the study include:

- ☒ IDC forecasts of IT spending by hardware, software, and services.
- ☒ IDC estimates of imports and exports of hardware, software, services.
- ☒ Macroeconomic data on GDP, workforce, population, tax rates, and total government tax receipts.
- ☒ IDC estimates of services and distribution channel activity that revolves around software.
- ☒ The annual BSA-IDC Global Software Piracy Study which estimates rates of packaged PC software piracy around the globe. The most recent version can be found at [www.bsa.org/globalstudy](http://www.bsa.org/globalstudy).
